

THE GRANDVIEW SLIDING DOOR

BEAUTIFULLY
DESIGNED
WITH YOU
IN MIND

Every time you look through a vinyl sliding patio door the world comes to life. Our doors are uniquely designed to fit the way you live, blending advanced technology with innovative features that add beauty and value to your home.

Heartland
WINDOWS

“The Strength of the Heartland”

The performance and durability of our vinyl sliding patio door is determined by the character of the vinyl itself. We follow the most demanding manufacturing standards to ensure the quality of every vinyl component we produce.

REINFORCED FOR QUALITY

The sliding patio door vinyl sashes are reinforced with steel bars for added strength and durability.

THE STRONGEST VINYL FRAMES

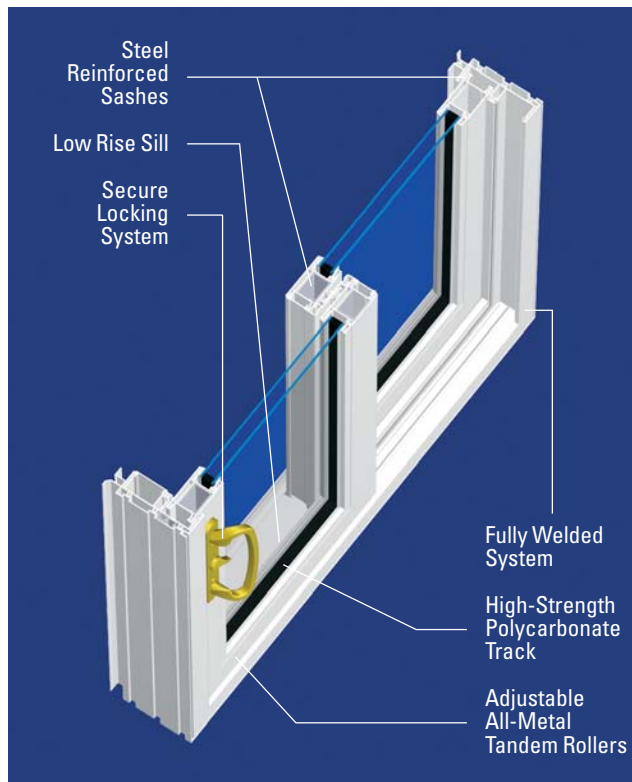

Fusion-welded corners on both the frame and sash and a multiple hollow chamber design build strength and structural integrity directly into every vinyl sliding patio door we manufacture.

PUT AWAY THE PAINT FOR GOOD

Integral color throughout the vinyl creates a lasting finish that never needs painting. The vinyl in our sliding patio door will never chip, peel, or crack—guaranteed!

ENERGY-EFFICIENT

Our multiple hollow chamber design produces a thermally efficient frame with superior resistance to heat transfer.

FEEL SAFE AND SECURE

Our sliding patio door comes standard with a heavy-duty locking system that will make you feel safe and secure.

HARDWARE OPTIONS

Brass handle set, key locks and dead bolt locks are optional.

EASY ROLLING

Adjustable all-metal tandem rollers running on a high-strength polycarbonate track ensure that these doors open and close easily and quietly.

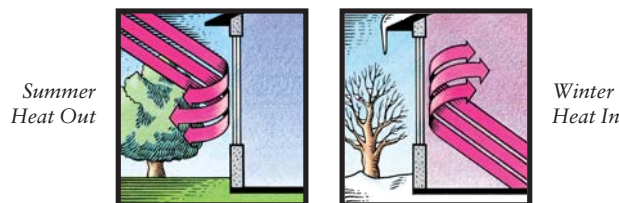

HEAVY-DUTY SCREEN DOOR

Standard with our sliding patio door is a heavy-duty, aluminum extruded screen door with no-rust fiberglass mesh and adjustable rollers.

YOUR CHOICE OF DESIGNS

Available in two-, three- and four- panel door designs.

LOW E = HIGH PERFORMANCE

Low E (low emissivity) coated glass is an important component for our sliding patio door. Low E specifies a microscopically thin, virtually invisible coating deposited on a glass surface. This coating limits radiant heat flow between window panes by reflecting heat into your home during cold weather, and back to the outdoors during warm weather.
